This program locates itself according to available memory and is actually two programs in one. By following a simple, menu driven format, programs can be loaded and saved with ease.

BREAKPROOF enables error free BASIC programs to be loaded from tape or disk, merged with a machine code routine and then re-saved to either tape or disk. Once a BASIC program has been breakproofed it will, on loading autorun. If the BREAK key is hit during program execution, the normal BREAK message will not appear, instead the program will automatically restart.

FILECOPIER allows the transfer of BASIC or Machine Code programs, that is, T or B type files, from tape or disk in any of the following combinations or formats.

| | |
|----------------|----------------|
| * Tape to Tape | * Tape to disk |
| * Disk to Tape | * Disk to Disk |

The utility makes it possible to produce single or multiple disk or tape backups of all programs quickly and easily.
